

LEED® M&R Credit Assistance

Proper handling and management of solid waste materials is an important part of LEED® Materials and Resources (LEED M&R) certification and a key element in implementing sustainable practices in your organization. This involves gaining an understanding of your waste patterns and developing effective recycling, reuse and disposal programs for ongoing consumables, durable goods, and construction and demolition (C&D) waste.

Achieving maximum credits for Solid Waste Management is now easier than ever when you have the full support of Waste Management and Green Squad. We can help you create and implement the programs you need to maximize your LEED credits and gain certification in the shortest amount of time possible.

Green Squad Can Help

As a part of Waste Management, the leading environmental and waste services company in the country, we offer the best services in the business to help you achieve the credits you need for LEED M&R Solid Waste Management.

- **Credit 6 — Waste Stream Audit**

We will conduct a comprehensive analysis of your facility's ongoing consumable waste streams and work with you to identify the greatest opportunities for increased reuse and diversion.

- **Credit 7 — Ongoing Consumables**

We can establish and expand waste reduction and recycling programs for materials that are regularly used and replaced during the course of business, such as plastics, paper, toner cartridges and batteries.

- **Credit 8 — Durable Goods**

We will develop waste reduction, reuse and recycling measures for durable goods such as computers, copiers, and refrigerators to lessen the strain on local landfills and the environment.

- **Credit 9 — Facility Alterations and Additions**

We can help you find ways to divert C&D waste from landfills and incineration facilities and redirect the reusable materials back to the manufacturing process or to appropriate sites.

Ask yourself:

- Have you considered pursuing LEED M&R certification for your business?
- Do you have a clear picture of the waste streams throughout your building(s)?
- Do you currently have programs in place to handle and recycle consumables and durable goods?
- Are construction waste materials handled responsibly when changes are made to your facility?
