

Sustainability Assessments

Building sustainable practices into your business requires a fairly large commitment on your part and can involve a number of different programs and activities that address everything from your organization's energy and water use to how you dispose of and reuse various waste materials. For many companies, the first question that often comes up is "Where do I start?"

We can help put your business on the path to sustainability by providing you with a clear picture of where you stand today. Our Sustainability Assessment can show you exactly how effective you are with sustainable practices such as water and energy efficiency and identify the greatest opportunities for improvement.

Green Squad Can Help

We offer a host of assessment services to help you determine how far along you are with sustainable practices and where the significant opportunities lie for your business.

- **General Sustainability Assessment**

Infusing sustainability into your company's DNA requires a holistic approach; one that focuses on the people, processes, and technologies that drive your business every day. With the backing of our strategic partners and years of experience with resource management, our Sustainability Assessment can help you identify solutions for virtually any challenge.

- **Water Efficiency Assessment**

We will analyze all of your available water sources and how you are using them, and provide you with practical recommendations that will help to reduce consumption throughout your organization and save you money. Improvements such as low-flow faucets and toilets, durable landscaping and water-saving measures in employee cafeterias, for example, can have a tremendous impact on your overall water spend.

- **Energy Efficiency Assessment**

Our efficiency assessments help us pinpoint conservative energy management solutions that reduce your expenditures without requiring excessive capital outlays. We will identify "quick wins" that can deliver immediate returns, such as the use of energy efficient lighting, computer equipment, and Energy Star® appliances.

- **Waste-to-Resource Assessment**

We will show you how to turn your waste into usable resources. By identifying alternative disposal opportunities that divert waste from landfills, we can help you implement solutions that lower your overall waste spend, create promising new revenue streams, and provide sensible material purchase alternatives.

Ask yourself:

- Do you have measures in place to monitor and minimize water use?
- Are you taking steps to keep your energy expenditures down?
- What kind of recycling programs, if any, have you implemented?
- Have you looked into ways to transform your waste into usable resources?

Let's Get Started!
