

# Waste Reduction Solutions

Forward thinking companies around the world are integrating sustainability throughout their operations and many start by changing how they manage, reuse and dispose of solid waste materials, which is now seen as an increasingly valuable resource. The first and most important step is developing a comprehensive waste strategy that addresses sustainable practices at every corner of your business. That's where we can help!

We can pinpoint opportunities in your existing waste streams to help you reduce your energy expenditures and divert waste materials from landfills to more appropriate sites.

## Green Squad Can Help

We offer a range of proven waste reduction solutions and services to help your business save money while reducing its impact on the environment.

- **Waste-to-Resource Assessment™**

We will show you how to turn your waste into usable resources that have value. By identifying alternative disposal opportunities that divert waste from landfills, we can help you implement solutions that lower your overall waste spend, create promising new revenue streams, and provide sensible material purchase alternatives.

- **Recycling program development**

Waste Management maintains a national network of Waste Management Recycle America (WMRA) facilities, which enables us to find cost-effective disposal alternatives for virtually any type of recyclable material.

- **Waste strategy**

We can help you develop a comprehensive waste strategy that redefines what "waste" really is and leverages the value of residual materials to reduce costs, optimize revenue opportunities, and alleviate the strain on landfills and the environment.

- **Waste system optimization and design**

Our waste reduction solutions make it possible for builders and architects to "design-in" features that enable building tenants to achieve maximum waste sustainability the day they move in.

### Ask yourself:

- Have you explored ways to create new revenue streams through waste diversion?
- Does your current waste strategy include measures for redirecting materials back to the supply chain?
- Is your business utilizing recycling programs to their fullest extent?
- Are you looking into pursuing LEED® Materials and Resources (M&R) certification for Solid Waste Management?
